SRT4 Gen2 4-Zone Streaming Media Server

The SRT4 Gen2 is a 2nd generation device that builds 4 independent network streamers into one box. The companion App – 'OSD Player' – allows you to select each of the streamers separately or, using the universal 'Bus' input, an independent, centralized source. Each streamer provides access to your favorite streaming services, including Spotify, Airplay, Amazon music, Tidal, Napster, and internet radio sources such as TuneIn, iHeart Radio and vTuner. Each streamer also has inputs for RCA analog, Digital Coax and Optical, USB Audio, a 12v Trigger and RCA analog output. By combining all of these options for each of the 4 streamers you have access to any of the sources you use for enjoying content, independently, in up to four zones or rooms. Zones can also be linked to share sources, allowing a single source to be played in all zones or rooms.

SPECIFICATIONS
